Oirc's homepage is located on my space at my website I sometimes make a workshop for Oirc and you can watch the video tutorials at the blog. Oirc is easy to use, although it can be confusing also. Important features: compatibility with all major operating systems. This means: Windows, Mac, Linux and BSD (you can also watch the video tutorial at the website) *the windows Oirc for win10 is build upon the MSI version of Oirc and not released officially. I made it for myself. cross platform (windows or linux) *my focus is for windows, but i'm a linux user (a ubuntu user mainly) and i'm not a programmer, i just need the features dialog for configuration (if you want to use it) multi channel-support * channels are defined in the dialog for config irc-over-ssh-support ircproxy-support forward-support (my project at time of writing :)) Worked out the default configuration on my machine. I take this configuration to work with me. And i will be adding the features to the tutorial. The Oirc setup is easy. It is mainly about the configuration of the irc-settings and the irc-server. The configuration is broken up into two steps, the first is a lot of configuration for irc-channels and the second step is the dialog for the configuration for defaults and the Oirc-interface. 1) Channels channels are defined by the dialog for configuration. To add channels, you need to type /window /addchat /join /join #test. and you join the channel. To display the current channel list you type /window /display. Configure this to your wishes, here are the advices to take in to account username: The email or the name of your gebruiker password: Please use a strong password for your irc-account nickname: Change this into something short, you could change your real name to something like "mijn". *channels: the name of the channel *channel-list: the name of the channel-list *channel-display: the name of the channel-display *channel-message: the name of

Oirc Product Key [Win/Mac]

Oirc is a small irc-client for windows. It is basically a console based irc-client. Its main purpose is to be a small and comfortable solution for irssi. Its size and interface are meant to be similar to bitchx. Oirc should be compared to such other irc-client as xchat or irssi. But it is a fully command line client, no graphical user interface. Oirc is made by a single developer, i do not even know his real name. i

Oirc

Oirc is a small native windows-based irc-client for the global chat network. It is made to be as independent as possible of other network-client. Oirc is open source, released under the GPLv2 and runs on windows only under the windows operating system. i am working on native windows support. my 2 goals are: native windows support and support for windows 10. anonymous FTP and SMB clients for anonymous ftp and samba are included with native windows support. cross platform support is best done with "only win" clients. native windows support is the key, don't try to do cross platform with a win client. sorry, because i didn't found something like that. When using openssh and windows, you must use the native port and not the standard one. By default openssh listens on standard port 22, which means that you will be able to connect to this port on Windows, but it will be impossible on Linux. Hosts: 127.0.0.1 localhost Server name: Oirc.Oirc.us.es It will set the hosts file of the client. localhost is the default host, which is the ip 127.0.0.1. 127.0.0.1 is the local loopback ip, or localhost without the domain name. Disclaimer: All the design for Oirc is my work, and I do not belong to any organization, company or designer. I do not wish to make any profit from it, at least not in the next 2 years. I'm only passionate about coding and will free my program in the web-sites, because is the only way I could achieve the level of free software that I feel Oirc deserves. Oirc project information: Date: 2010-12-10 Oirc Version: 0.1.1 ** TODO ** [Oirc](is an open source irc-client, designed to be a small irc-client for the global chat network. It is a small irc-client for windows. [Oirc](is completely commandline based, except the dialog for the configuration of the defaults. The configuration dialog is only

What's New In Oirc?

Oirc is a small IRC-client for windows. The Oirc DLL is free software and available under the GNU-GPL-Licence. Oirc is a small IRC-client for windows. It has no GUI. The Oirc (Oirc Daemon) executes in the background. The Oirc Executable You need to double-click the exe to start the Oirc-client. This exe also contains the DLL for the Oirc client, configuration files and some support files for the default configuration. Oirc is version 0.2.0.0. Oirc Readme: The exe-file is only readme and about file. But you can look inside the dll for further informations. Oirc Screenshots: Oirc Properties Oirc uses standard Windows user-interface to define the properties of the application. This means you can change the properties in a normal Windows dialog without using the command-line properties. Oirc can be started from command-line by using startOirc.cmd which takes the -config=filename as a parameter. The parameters -mode and -id The -mode specifies the mode of the connection. It defaults to privmsg. If you want to change the mode of the connection use -mode. The -id sets the identification mode. If you want to change the identification mode use -id. -port Specifies the port. The default is 6667. -dontstartatlogin Does not start the Oirc-client when the Windows-system starts. Use -dontstartatlogin to reset this behavior. -noconfig Does not look for configuration-files. -config=filename Load a configuration-file from filename. The configuration-files Now comes the files which can be loaded via the config-parameter. The default config-file is Oirc.config. Oirc is inspired by the BitchX-client, so the config-file is similar and inherits some parameters from the bitchx-config. The config is written
