Q: How do I color the axes in efig I have a set of regularly sampled signals in the following form. data = Table[Sin[n^2 \[Pi] t], {n, 1, 500, 5}] I then apply a Hilbert transform to each signal in the above list (to get rid of the DC component), HilbertTransform[data] HilbertTransform[data] // Plot This yields the plots in the above figure. I would like to color the axes with different colors for each signal. I.e. I would like to color the following red, blue and green, respectively. How can I do this? A: one way is to use: data = Table[Sin[n^2 \[Pi] t], {n, 1, 500, 5}]; HilbertTransform[data]; HilbertTransform[#] & /@ data // GraphicsRow you can also specify a range of colors to use: colors = {Red, Green, Blue}; HilbertTransform[data]; HilbertTransform[#] & /@ data // GraphicsRow[Flatten[{{#, ColorData[colors, #]}]}] &] Q: MySQL query error When i type this SQL query SELECT s.*, (SELECT m.id, m.name FROM maki_site_register s WHERE
