The Healing Brush helps you repair bad spots in images that may have been damaged during an editing process. The Clone Stamp and Healing Brush are useful for retouching images. The Magic Wand tool (located in the Tools panel) is a keyboard shortcut for the Photoshop Magic Wand Filter. It uses the "Adobe Hue" color model to detect different colors. Effect Filters include Color Overlay, HSL, Motion Blur, Puppet Warp, Grain, Lens, and Vignette. Filter effects can be placed on different layers, which allows you to create effects that would otherwise be difficult to achieve. Each Filter is a particular type of effect or design created for Photoshop. They are used to give your images a particular look. The Gradient tool (located in the Toolbox) is a way to apply a gradient across a selection or an image. The Gradient tool is used in the Adjustment Layers window. You can use colors to create a Gradient as well as to create Color Selections. The Pen tool (located in the Toolbox) works much like a brush, but the pixels created can be modified by the Pen tool. You use the Pen tool to create textures such as scratches, spots, graffiti, and so on. The Eraser tool (located in the Toolbox) erases pixels that have been selected or made visible using the Brush or Pen tool. If you make a change to the Width and/or Height settings for a Layer (although you may be able to change these settings after you place a Layer over an existing Layer), you will notice that the Layer Opacity changes accordingly. Image Editing & Retouching Features The following features help you edit images: The Crop Tool provides three different options to remove unwanted portions of an image. You can crop the image to a particular size, crop the image with a specific aspect ratio, or crop the image based on a selection that you create around an area of the image.
