## **C3520 Flash Loader 75 4 CSC V02 Citrus Lite**

one of the things that is unique about this release is the ability to run a bunch of different ip addresses on your network. this feature allows for some easy wireless setup and can also

---

be really useful if you need to have a number of computers on your network. usb flashes and sd cards are known to be safer than using writable cds. an increasing number of users want to have an easy way to transfer files to their computers and flash drives are a popular solution. they allow you to plug a memory stick into your computer and copy files to it. it is very easy to set up a bootable usb drive, and they usually have plenty of storage available. one of the features this release boasts of is the ability to connect to the internet while being

---

offline. this is a feature not found anywhere else in this ip. it would be able to be a great benefit in the case that you only need one device to be able to connect to the internet. the problem is, some devices are incredibly slow at acting like they are connected. keep that in mind when using the ability to connect while being offline. at the moment, your only option for transferring files to a memory stick is on a mac using a powerpc based computer. your only choices are either itunes, wifidrive or winflash. these are all great applications. winflash is a bit

---

easier to get around and use. the downside to it is that it only works when you have a mac connected to your computer. another problem with winflash is that there is no mac version. another feature that this release boasts of is the ability to change the name of your ip address. 5ec8ef588b
